

ACCENT LIGHTING

LIGHTING ARCHITECTURAL SPACES

gotham®

Putting architecture in its best light goes beyond general illumination. Well-conceived accent lighting draws all eyes to key architectural features, sculpture, art and other elements of interest, adding visual cues and contrast, and helping to define the atmosphere of the environment.

Working with Gotham's comprehensive selection of adjustable accent luminaires, designers can add drama, sparkle and excitement to a space.

LIGHTING TOOLS FOR ARCHITECTURE

Designers often turn to low-voltage halogen light sources to sculpt interior spaces. However Gotham offers precision accent lighting tools that make the most of virtually all available lamp types: incandescent line- and low-voltage, and HID.

Our goal is to accommodate the broadest possible range of candlepower, wattage, color quality, source efficacy and beam distribution, so that the most appropriate lamp choice can be made for virtually any application. Gotham luminaires are optimized for specific lamp types and applications, ensuring that the right accent lighting tool is available when needed.

A PLEASING, HARMONIOUS APPEARANCE

Of course, Gotham directional luminaires are designed with optimal light distribution in mind. That means maximum light exiting the fixture, even at high aiming angles. Optimized center beam optics assure optimal usable light, high efficiency and pleasing low brightness.

A considerable range of aperture sizes (1", 2", 3", 4", 6" and 8") lets designers choose a look proportioned to any space. And our accent fixtures can be specified in aperture sizes, trim colors and finishes consistent with Gotham's recessed downlights, providing a harmonious appearance and a sense of design continuity within a space.

With Gotham you're assured an exceptionally clean ceiling with minimal attention drawn to the luminaires.

AIMING, SHAPING, AND FILTERING LIGHT

Because directional lighting must allow precise aiming, Gotham goes the extra mile to ensure functional excellence. Our highly-engineered directional units provide full 360° horizontal rotation and up to 45° vertical aiming, with easy-to-use aiming and locking mechanisms. Hot aiming can be accomplished quickly and accurately.

There's also a complete complement of accessories to diffuse, shape and filter light, so you can fine-tune the lighting to each application. Locking filter holders, high-quality diffusing lenses and color filters enhance effects and improve the visual content of any lighting design.

EASY INSTALLATION AND MAINTENANCE

Installing recessed lighting can be problematic due to variable ceiling construction, so we've taken steps to minimize the difficulty. All Gotham luminaires allow simple post-installation housing adjustments to accommodate a wide range of ceiling types, with torsion springs designed to hold trims snug to the ceiling, preventing even the slightest light leak.

Once installed, relamping and service of Gotham accent lighting is easily accomplished from above or below the ceiling without the use of tools. And since relamping can be handled without touching the fixture's aiming mechanism, the lighting effect is not compromised.

We invite you to browse through these pages to preview some of the unique effects that can be achieved with well-conceived accent lighting. For more examples, call us or visit our website at www.gothamlighting.com.

Because building interiors are widely varied, a full complement of lighting tools are needed to convey the qualities of a structure and objects within it. Gotham's wide choice of luminaires allows you to create strategic differentiation and desired effects in virtually any environment.

ABOVE AND BELOW Illumination on vertical surfaces can call attention to sculpture, art and other elements of interest, and promote a feeling of openness. Grazing light from recessed directional luminaires can be used to accentuate wall surfaces with an interesting rhythm of scallops. Gotham accent lighting blends discreetly with the ceiling while offering all the advantages of directional sources. A wide assortment of accessories lets you diffuse, shape and filter light to fine-tune the effect.

Gotham accent lighting can create pleasing effects, adding visual cues and contrast. These precision lighting instruments offer full horizontal and vertical rotation with easy aiming and locking mechanisms.

All Gotham directional, wallwash and downlight fixtures are available in matching apertures and trims to ensure a sense of design consistency and continuity in a space.

The brilliance of compact point light sources with high luminous intensity, such as low-voltage halogen, elevates the appearance of illuminated objects and their surroundings.
