

# SURFACE-MOUNTED LIGHTING

LIGHTING ARCHITECTURAL SPACES

gotham®

Where ceiling types preclude recessed lighting, or where you prefer lighting that mounts to both horizontal and vertical surfaces, we invite you to consider Gotham's comprehensive selection of cylinders.

These adaptable luminaires offer specifiers a wide choice of lamp types and aperture sizes, all featuring high-quality Gotham optics. With surface, wall, and pendant mounting options available, and over 25 standard colors to choose from, it's easy to understand why Gotham surface-mounted lighting is a top choice of architects and lighting professionals.

#### **SUPERIOR PERFORMANCE WITH ALL LAMP TYPES**

Appropriate lamp selections can be made for every possible application. As in Gotham's recessed lighting products, reflectors in our surface-mounted luminaires are engineered to achieve a clear, pristine, low brightness aperture regardless of source.

#### **A PLEASING, HARMONIOUS APPEARANCE**

Rolled steel housings of impeccable quality are offered in a variety of appropriate colors for quiet integration with interior architecture. And Gotham surface-mounted luminaires are available in a range of sizes, so designers can make selections that best compliment a given space. Aperture dimensions are consistent with Gotham recessed luminaires, providing consistent appearance among surface and recessed lighting fixture types.

#### **EASY INSTALLATION; EXCEPTIONALLY LONG LIFE**

Gotham surface-mounted luminaires are shipped with all necessary hardware for a consistent, easy installation, minimizing construction cost. Robust mechanical design and high-quality materials result in extraordinary durability and long life. Zone 4 UBC earthquake capability is also optionally available. We invite you to preview the quality of lighting that can be achieved with Gotham surface-mounted downlights. For more examples, call us or visit our website at [www.gothamlighting.com](http://www.gothamlighting.com).

Gotham surface-mounted lighting provides consistency of appearance when surface-mounted and recessed lighting are combined in the same environment.

Gotham surface-mounted cylinders are especially well-suited for mid- to high-ceiling architectural applications. Optical systems assure a pleasing low brightness regardless of lamp source.
