

# FEATURES

- For use with 4" and 6" Gotham square mounting frames including LED, CFL, HID and Incandescent. Microflange™ trim provides a clean, flush appearance for use with drywall ceiling applications. 4" unit will fit minimum 16" on-center joist construction. 6" unit will fit minimum 20" on-center joist construction.
- Gypsum interface board: a fiberglass reinforced board provides a solid interface between the mounting frame and ceiling, preventing hairline cracks that typically form around the finishing trim. The gypsum interface board can easily attach to any Gotham square aperture mounting frame. Removable slats are provided to accommodate different ceiling thicknesses from 5/8" or 3/4". Adds 1/8" to overall fixture height.
- Plaster guard: snaps into aperture during the finishing process to protect the interface board and inside of fixture from plaster and paint.
- Available with either high impact polymer or anodized metal trims.
- One piece polymer trim eliminates mitered flange corners and inside corner gaps. Matte-diffuse finish standard.
- Semi-specular or matte-diffuse finish available with anodized metal.

All dimensions are inches (centimeters)
