

INDIRECT
for LIGHTING
that is EXPERIENCED

The Breez™ Series LED luminaire (BZL) is a **new class of recessed indirect architectural lighting** uniquely enabled by today's LEDs and advanced optical technologies. The patent-pending graceful gull-wing reflector design and highly-reflective optical coating combine to create a fully-indirect, efficient optical system.

Setting the Breez Series LED luminaire apart from most recessed LED troffers is its whisper-quiet appearance. Its minimal proportions and interruptions along the ceiling plane ensure a clean, sophisticated appearance that complements today's modern architectural ceilings. With no lens, diffuser or refractor to collect dust or trap bugs, the volumetric illumination is full, natural and balanced.

- 2'x2': 2400, 3000 or 3400 lumen packages
- 2'x4': 4000, 4800 or 6000 lumen packages
- Available in 3000, 3500, and 4000K CCTs
- Standard eldoLED® dim to 1% driver
- Additional driver options include dim to black (0.1%), DALI and DMX/RDM

SMART + SIMPLE.

The BZL comes standard with a 0-10V digital eldoLED® driver that provides smooth, seamless and flicker-free dimming to 1%. In addition, it is enabled with optional nLight® digital technology allowing it to communicate with Acuity Brands® control devices such as occupancy sensors, photocells and wall stations.

"The first totally indirect LED luminaire without a lens!"
