Note: See following pages for details.

Lamp not included
Weight: 17 lbs.

Construction

The luminaire bezel is one-piece, die-cast aluminum construction, .125" thick. The bezel encloses the lens and secures it to the one-piece die-cast housing with stainless steel tamper resistant screws. The housing has a four-hole mounting detail for installation directly over an outlet box, or conduit entry through three 1/2" threaded openings on the side or a 3/4" threaded opening on rear surface. The perimeter lens gasket is a one-piece silicone "O" ring. The pad mounting gasket is closed-cell neoprene that seals the housing to mounting surfaces. The .09" laser cut aluminum fascia plate and decorative acrylic lens are secured to the bezel by three aluminum standoffs using stainless steel hex head screws.

FINISH: Housing, fascia plate, and decorative shroud are finished in the same color. The powder coat finish uses premium TGIC polyester powder.

Optics

The optic lens is made of translucent white injection molded polycarbonate. The lens is UV stabilizing and .125" thick. The decorative lens is available in two styles, flush or large, and 6 colors. The luminaire uses an internal reflector made of semi-specular aluminum (HID), and high reflectance white powder coat finish (CFL) for maximum light output. The lamp positioning assures uniform brightness and illumination.

Electrical

HID ballast assembly sockets are glazed porcelain, medium base, with a copper alloy nickel-plated screw shell and center contact. HID ballasts are core and coil, high power factor, regulating type. The compact fluorescent ballast is electronic, high power factor multi-volt. The socket is high temperature thermoplastic with lamp retention clip. Lamp is not included.

Installation

The luminaire is surface mounted. To install first loosen the two socket head set screws to free bezel/fascia assembly and lens from the housing. Remove component cover by removing two screws. For maximum vandal resistance, use the four mounting holes provided to affix the luminaire to surface. Use a 9/32" drill bit to clear the mounting holes. Mount over outlet box or use surface conduit wire entry for electrical connection. Note: 150°C wire must be used at 150° surface conduit entry port as labeled. Remove backing from pad gasket provided and place on back square portion of housing then place the four small circular gaskets on mounting bosses.

Listing

The luminaire is tested to and meets all NRTL's outdoor requirement standards, wet location use, through the fully accredited and approved CSA laboratory. Luminaire is IP65 rated.

WARNING: Tersen reserves the right to modify specifications without notice.
