Sustainability... Innovation... Commitment.

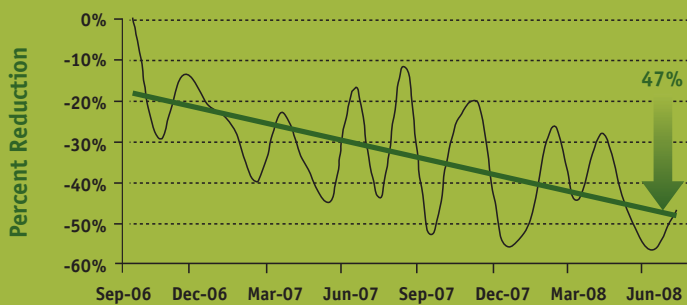

Three simple words describe the Acuity Brands Lighting focus on reducing harmful impacts on the environment. Our commitment is clear. We demonstrate it first and foremost in how we conduct our business.

SUSTAINABILITY...

Lighting Electricity Consumption

Copy Paper Use

Our commitment to environmental sustainability begins in our own operations. Reducing our environmental impact is integrated to our daily activities at Acuity Brands Lighting. Our Sustainable Operations Council includes representatives from all of our North American facilities with the goal to achieve year over year reductions in our use of natural resources. Some specific examples of our accomplishments include:

- **Reduced our overall electricity consumption by 13.4%** since September 2005. In 2008 alone, electricity was reduced by 4% and 7% respectively at our two largest manufacturing facilities in Monterrey Mexico and Cochran Georgia.
- **Reduced 37% of the water used in our paint system** with modifications that enabled us to reclaim water for this process at three facilities.
- **Reduced our impact on landfills by 40%** by establishing corporate recycling and green procurement standards. Office paper use has been reduced by 47% since September 2006 and revenue from aluminum recycling is contributed to community projects.
- **Submitted LEED Silver Certification** for our New York City office and Granville Ohio facility.

Sustainable Operations Council discusses plans to reclaim water in paint operations.

Our employees are directly involved with industry groups working to establish energy and environmental standards. Our companies have been recognized for various industry awards supporting the energy and environment. Lithonia Lighting is Energy Star Partner of the year for the second time.

INNOVATION...

Continuous improvement is engrained in our culture and is the foundation that supports innovation. Acuity Brands Lighting designs products that save energy, but we also focus on the materials and processes used in our products. Innovation in product design, sourcing, transportation, operating energy, recycle-ability and reusability are at the forefront of our strategies to provide lighting that is good for people and the environment.

INNOVATIVE PRODUCTS...

We focus on innovations that have impact.

Our product brands have a rich history of focusing on lighting solutions that provide real energy reductions. From solid state LEDs and electronic HID lighting to high efficiency T5 fluorescent and compact fluorescent – we advance new technologies in lighting.

Our RELIGHT solutions make renovations of commercial lighting more energy efficient, improve lighting quality and are installed without disruption to business operations. When our lighting products are combined with Synergy® controls, you are assured of solutions that provide the right amount of light at the right place at the right time. Our Reloc® flexible wiring systems make future renovations easy and provide the ability to reuse wiring and lighting equipment.

INNOVATIVE PACKAGING SOLUTIONS...

Our innovations don't stop with lighting products.

We have worked with various customers to reduce packing and waste on construction sites. We have reduced packaging size, which increases the density of shipments to job sites. Our design teams carefully evaluate the types of materials used for packaging. We have also developed shipping systems that minimize waste and can be returned and reused for future shipments.

COMMITMENT...

While others talk about commitment, Acuity Brands Lighting demonstrates it with our actions.

Our commitment is three-fold:

- **commitment to our customers**
- **commitment to our people**
- **commitment to our industry**

We constantly strive to understand our customer's needs and work creatively to identify new solutions to improve their businesses. We provide a variety of tools and services to promote green building. From energy estimators and BIM modeling to renovation contracting services, Acuity Brands Lighting understands the requirements for sustainable buildings.

We understand that a great company has a foundation in great people so we endeavor to provide a work environment that supports our employee's well being and their own commitment to environmental interests.

We provide progressive options allowing employees flexibility in working schedules to reduce their work commute. Our programs provide the opportunity for employees to be involved in the community and we support environmental options in our charitable giving campaigns.

Acuity Brands Lighting has been at the forefront of the industry leading the development of outdoor lighting guidelines for communities to reduce light pollution. Look for the Acuity Brands Nighttime Friendly™ logo for lighting equipment recommended for environmentally sensitive designs.

Our employees are directly involved with industry groups working to establish energy and environmental standards, such as the ASHRAE/IESNA Standard 90.1, US Green Building Council, Consortium for Energy Efficiency, US Green Building Council, Clinton Climate Initiative and Energy Star programs.
