

Reduce, Reuse, Recycle. . .

RELOC®

RELOC Wiring Solutions' modular products are a greener solution than the traditional on-site construction approach to indoor building wiring.

RELOC products:

- Minimize electrical construction wastes during initial construction through off-site assembly in a controlled factory setting where scrap is 100% recycled.
- Maximize reuse of the entire branch circuit wiring system during renovations, and tenant-improvements given the increased need for moves, adds and changes in today's indoor facilities.
- Maximize flexibility and productivity through the ease and speed of installing, relocating and reusing.
- Maximize use of recycled materials in its construction.
 1. Cardboard packaging – 100% recycled
 2. Aluminum – 100% recycled
